# Chrysanthemums

Fred C.  
*Gloeckner*  
& Company,  
Incorporated

15 EAST 26th STREET  
"At Madison Square," New York

PLANNING your chrysanthemum crop is of vital importance to you. Many growers are failing to make a profit of this worthwhile crop because they have overlooked the value of planning. This crop is of major importance and should not be considered a catch crop, instead, all the other crops you grow should be planned around the chrysanthemum. The correct varieties, quantities of each variety to grow, productiveness, cultural requirements and time of flowering all have to be considered in planning a successful attack on your mum problem. How often do you plant more of one variety just because it happens to be easy to propagate? Elimination of glutted cut flower periods can only be accomplished by careful planning.

Many growers are finding that it is more profitable to purchase all of their rooted cuttings each year rather than just a portion. The specialist is able to deliver the cuttings at the desired date, free from insects, properly labelled and packed. He employs trained people who carefully check for disease, reselect the varieties from time to time to improve type and color, and who see that the cuttings are taken at the proper time.

Each year the hybridizers introduce scores of new varieties which will eventually replace the present. It is just a part of the *Gloeckner* service to keep you advised. We will gladly help plan your requirements for the coming year.

**For important information on pot plant culture,  
shading and delayed flowering see pages 18 to 31.**

#### SCHEDULE OF RATES

The prices per 100 and per 1,000 appear opposite each variety in the catalogue.

250 of a variety will be billed at the 1,000 rate.

If order totals less than 1,000, 25 of a variety will be billed at the 100 rate.

More than 25 of a variety must be in multiples of 25.

Any quantity less than 25 will take the 10 rate.

Below are listed the rates per 10 corresponding to the respective rates per 100.

Rate per 100	Rate per 10	Rate per 100	Rate per 10	Rate per 100	Rate per 10
\$3.25	.50	\$7.00	\$1.25	\$12.00	\$2.00
4.00	.50	8.00	1.50	15.00	2.50
6.00	1.00				

## Novelty Chrysanthemums

### YELLOW SNOW

A bright Pernet yellow sport from Snow. The form and growth habit are identical with the original. Because of its season, December 30th, heavy production and excellent color this variety will prove to be one of the most valuable additions to the late pompons.

### ROSALIND

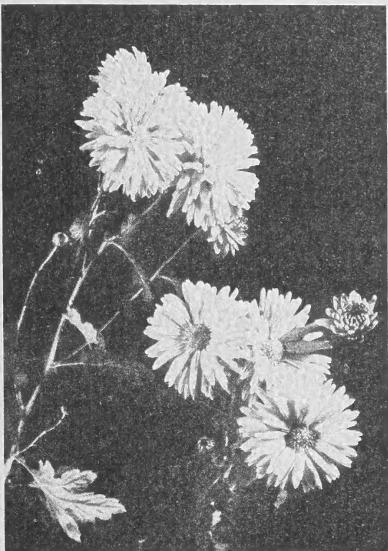

A pink single that might be described as a Pink Yukon. The color is a clean medium pink. The growth habit is excellent; a very free grower; medium sized stem and foliage; no tendency to blindness; it flowers at a time of the year when pink is scarce. It appears to do almost equally well under either ground bed or raised bench environment. Matures December 20th.

### SONATA

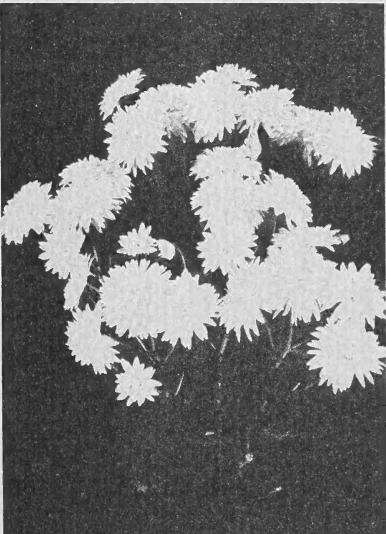

A very brilliant orange bronze single. The color is brilliant to the last; its keeping qualities are unusually good. Its growth habit is decidedly vegetative. It is a very easy doer, a heavy producer and it is very popular with the retail trade. Plant early on raised benches; last pinch August 1st. Matures December 5th.

### CAMEO

An ivory pompon of unusual size and substance that blooms the same time as Yuletide, Cordova and Silver Star. A strong persistent grower possessing a rigid and well spread spray. The growth habit is superior to any worth while variety in its color class and blooming season. The flower is large and of an attractive form. It should be the answer to the grower who demands a white or cream pompon for early December that will provide him with quality, production and reliability. Matures December 5.

Rosalind

Cameo

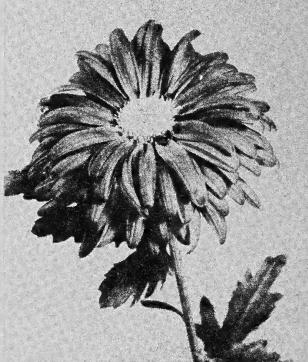

ALL VARIETIES LISTED ON THIS PAGE

\$2.50 per 10, \$15.00 per 100, \$125.00 per 1000

## Novelty Chrysanthemums

### MATADOR

A rich red anemone of large size and after the style of Crimson Glow. It improves that variety in every respect. The growth habit somewhat resembles that of Valencia except that it is not so vegetative. The stems are stiff and straight with the flower held rigidly and erect. The form is excellent, color is very bright and vivid. For disbudded sprays plant 7 x 8; pinch July 25th; grow 2 stems; 3 flowers per stem. As a single disbud, plant 7 x 8, last pinch August 5th; grow 3 stems. Matures December 5th.

### PENROD

Medium-sized Pernet yellow. Very fine incurved form similar to the old variety Bonnaffon. Possesses good substance giving the variety good keeping as well as good shipping qualities. A free and easy grower with good stem and foliage. Will produce three blooms per plant with remarkable uniformity. A very attractive looking variety that should be useful to growers desiring moderate size together with excellent form and good substance. Matures Nov. 10th but can be easily held for a week later.

### CAMBRIA

A free growing commercial variety of average size. Form very closely incurved. Color intense, golden bronze with a metallic sheen. Strong wiry stem and small foliage which seems to fill out and stiffen as the flowers mature. It is very easy to grow and quite resistant to disease. Produces two blooms to the plant very uniformly. Blooms possess excellent substance and ship extremely well. An excellent and profitable variety for both wholesale and retail grower. Matures Oct. 25th.

### ORANGE BELLE

Small flowered pompon with good form and substance. Color reddish orange rust. Very free growing habit with small but very persistent foliage. Good spray formation on wiry stems which attain a good length. This variety is outstanding in growth and the attractiveness of its clean stems and foliage. We believe this will prove a profitable variety for the grower. Matures in late November and early December.

### EUROPA

An intense cardinal red single of outstanding brilliance and exceptional substance. It may be grown either as a single disbud or as a disbudded spray. The color improves any existing red single. A very brilliant red on the inside of the petal and a gold on the reverse. Europa might be said to mark an epoch in red singles. Its growth habit is medium in vegetativeness. It is fairly easy to grow. The spray formation is stiff and rigid. It must be carefully spaced, carefully pruned and accurately disbudded. We believe it will well repay any man who will give it this kind of cultural treatment. Matures Nov. 5th.

### AMBERLITE

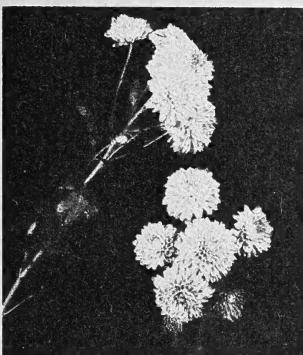

A bright orange bronze single of excellent substance and easy culture. It is a good producer and a strong persistent grower that is not exacting in its cultural requirements. Does not require disbudding; best in natural sprays. Do not overcrowd; plant 7 x 8; grow 2 stems. Matures November 25th.

ALL VARIETIES LISTED ON THIS PAGE  
 \$2.50 per 10, \$15.00 per 100, \$125.00 per 1000

# Novelty Chrysanthemums

## METEORE

Large, round bloom on good stem with good foliage. We recommend this variety as a late yellow to bloom during mid-December. Holds well on the plant. Take terminal bud.

## FLAMBEAU

Has the same golden bronze color as Dorothy Turner, but is a much better producer. The sprays are more slender, which makes them more serviceable for the retailer. We recommend this variety most highly. Heavy producer. Blooms November 5th.

## ISOBEL

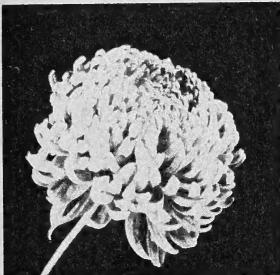

May be described as a pink Nuggets as it grows about the same height and blooms about the same date, November 1st. Good stiff spray. The color is a good solid shade of bright pink. Good for shading.

## BRONZE MASTERPIECE

This is a bronze sport from the popular Masterpiece and should become as popular as the parent. Good for disbudding or grown in sprays. Blooms the middle of November.

## ROSEUM

Large, incurved bloom with good stem and foliage. Grows 5 ft. from June planting. The color is a bright deep pink which does not fade with age. Take terminal bud. Blooms November 1st.

ALL VARIETIES LISTED ON THIS PAGE

\$2.00 per 10, \$12.00 per 100, \$100.00 per 1000

*Novelty Chrysanthemums***GOLDSMITH**

A large golden yellow pompon of Decorative Princeton type flower. Flowers attain a diameter of  $2\frac{1}{2}$  —  $3\frac{1}{2}$  ". Produces well formed sprays on strong stems of medium height when last pinch is made about August 1. An excellent variety to follow Princeton and bloom at Thanksgiving. Matures about November 20.

**WINTER SET**

An intermediate, lemon yellow pompon which blooms December 25. Attains a diameter of 2" and possesses good substance. Of medium height, from June planting with an August 5 pinch. The latest of the yellow pompons.

**WHITE FREIDA**

Clear white ray florets with a lemon yellow anemone center identical with that of its parent variety Freida. In all respects except color this variety is identical with Freida.

**VIBRANT**

A large decorative pompon. Matures about December 20th. Color is a brilliant deep lemon yellow. Flowers attain a diameter of about  $2\frac{1}{2}$  " - 3" when fully developed. A vigorous grower. Very productive. Well suited to either raised bench or ground bed culture. Does not come blind. An outstanding late yellow pompon.

**YELLOW BUSHNELL**

Pernet yellow sport from Rev. Horace Bushnell. Produces well formed sprays. Not particular as to cultural requirements. Flowers November 8.

**INDIANAPOLIS WHITE**

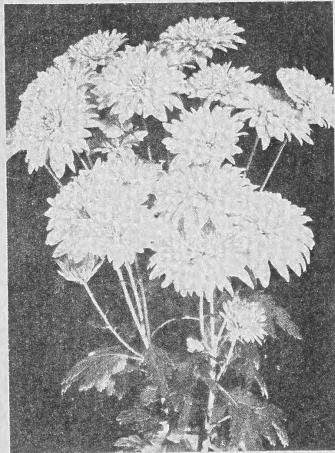

This clear white sport from Indianapolis Pink has all the foliage and growth qualities of the parent variety. An excellent habit and form for a white mum. A quality mum for November 10th flowering.

**APRICON**

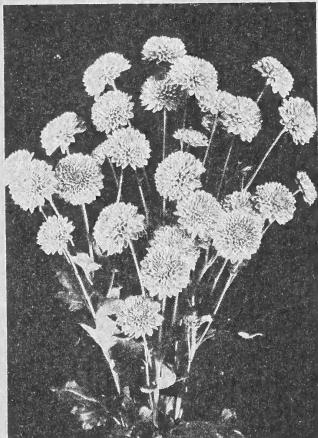

An intermediate, apricot yellow pompon possessing excellent form and substance. Matures November 25th on rigid stems of medium height when planted in late June and pinched about August 10. Flowers are 2" in diameter.

ALL VARIETIES LISTED ON THIS PAGE

# Pompon and Decorative Varieties

The term pompon is applied to those varieties which are of the true rounded type, and those very nearly approaching this type.

Decorative varieties are those which are a distinct departure from the rounded type. Their flowers are less compact, partly reflexed and display more of the color of the inner side of the petals.  
Size of flower is indicated by S—small; Int.—intermediate; L—Large.

† Indicates Korean varieties.

## *The Use of Black Cloth Shading to Advance the Flowering Season*

The varieties in the following list lend themselves satisfactorily to black cloth shading. The dates opposite the varieties are those found most satisfactory when the given blooming date is desired.

Use a good durable Black Cloth which has no less than 64 x 104 threads to the inch. Best results are obtained when the light intensity under the cloth when applied is 2 ft. candles or less. More light intensity than this will result in delayed flowering and unevenness in bloom.

The cloth should be applied at 5:00 P.M. and removed at 7 A.M. Shading is continued on pompons until the latest buds show color and most of the flowers are well developed. On the large flowering varieties shading can be discontinued after all flowering buds have attained the diameter of approximately half an inch.

Make sure that covering is complete on all benches shaded, as any leaks in light will cause uneven spots in the bench at flowering time.

It is not recommended that the large flowering varieties be grown outdoors under shade, unless proper protection is provided. Fall rains and wind storms play havoc with large flowers when not protected. Therefore, inside growing is suggested unless proper overhead protection is provided.

Best results are obtained when varieties of approximately the same blooming date are used for any one particular shading. When a spread in blooming dates is desired, repeated shading of a few varieties at weekly or ten-day intervals has proven more satisfactory than grouping a large number of varieties into any one shading. The shading dates given are those which have been found to be best for the respective varieties. We recommend benching six weeks prior to shading.

When only one branch is desired following a pinch, soft pinching should be practiced. Removal of the mere tip is best, for example, when standards are pinched to avoid crown buds. Thus the final pinch on standards should be a soft pinch.

When several breaks are desired as in pinching of pompons, the pinch should be low enough to remove all of the soft growth. The lowest point at which the stem breaks off readily is about right for this type of pinch.

For strong stems a single pinch is best. With more pinches plants become successively weaker.

As an added suggestion, we would recommend the removal of black cloth after night fall to allow for a better circulation of air. This would prevent the accumulation of dampness and the unfavorable results that usually occur therefrom. This of course will cause considerable extra work as the cloth must be replaced before morning. We feel however, that as this will improve the growth and the foliage it will be well worth the effort. Perfection is never obtained without added effort.

# Disbudded Sprays

Good Chrysanthemums result from the careful and thorough practice of the basic principles of plant growth, plus the acknowledgment of certain differences in the nature of various varieties. Growing disbudded sprays is a modification in culture which is very much worthwhile.

The procedure in growing disbudded sprays, is to wait until the crown bud forms, then remove all vegetative shoots but three. Later when terminal buds appear disbud each shoot similar to the normal disbudding of standards. When the blooms mature there are three flowers in each spray. In singles and anemones the size of the blooms will be a trifle smaller in size than when they are grown as one flower per stem.

Bunch disbudded spray pompons similar to the way used in bunching the regular grown pompons.

*Varieties which may be grown as Disbudded Sprays are as follows:—*

# Pot Plant Chrysanthemum Culture

Well grown short pot plants of Chrysanthemums have been finding a ready market in various sections of the country. We feel that many growers have been neglecting this valuable Fall potted plant. In many cases, poor attempts have been made in growing this plant and we offer the following suggestions for your consideration:

The varieties in the following list have been found to lend themselves satisfactorily to pot plant culture. These varieties have been chosen because they are adaptable to black cloth shading as well as for normal flowering, thus giving a flowering range from September 1st to November 20th with relatively few varieties.

There are other varieties that may be used for pot plant culture, however varieties that flower after November 20th are not recommended for the very early shadings. Whether to grow pot plants in sprays form or disbuds, depends entirely upon your market. There is, however, a definite trend to the disbud type. For obvious reasons, the shorter growing varieties are more desirable.

## CULTURE

**SOIL**—Chrysanthemums require a good open soil to which one-fifth manure has been added. A good rule to follow is to sterilize all soil for pot mums.

**PLANTING**—For good compact plants, we recommend planting three rooted cuttings directly into 5½" pot on dates given. One additional cutting for each ½" increase in pot size. If these are spaced well, a better balance plant will result than if planted together in center of pot.

**PINCHING**—Three pinches are sufficient for a good short compact pot plant. The first pinch should be approximately 15 days after planting. The second pinch about 30 days after planting and the third and last pinch as listed on the chart. Some of the varieties listed grow taller than others, however by observing the last pinching date all the varieties listed should finish reasonably uniform in height. A hard pinch is suggested when the last pinch is delayed until after shading. For example: Yellow Beauty when shaded July 1st and pinched July 11th.

**SHADING**—Same procedure as for cut flowers. Black cloth should be new or in best of condition for very early shadings to avoid delayed and uneven blooming. When possible take cloth off at night, replacing before daylight.

## DISBUDDING

**WITH POMPONS**—Remove center bud except on the button types. This gives better spacing to the remaining flowers. Also the center bud generally matures earlier than the surrounding buds, giving the appearance of irregular blooming and premature aging. Remove this bud as early as convenient.

**WITH DISBUDS**—Disbudding must be done early, late disbudding results in small flowers and weak and elongated stems directly below the flowers.

**HEIGHT**—By following our directions pompons grown in 5½" or 6" pots will be 11" to 13" high. Disbuds will grow 14" to 17" above the top of the pot.

## *Cultural Pointers*

Chrysanthemums will grow well in a wide range of soil types but a fibrous silt loam is preferred. Blue grass sod, to which super phosphate has been added, has given excellent results.

Many growers plant chrysanthemums in old soil without sterilizing and expect good results. Many diseases and too much fertility are often found in old soil. Verticillium wilt (Seidewitz disease) is carried over in the old soil. If old soil is used sterilize with steam so that the soil is heated to 180 to 200 degrees F. for at least one hour. After sterilizing leach the soil with large quantities of water to reduce the available nutrients.

Evidence shows that the soil should be slightly acid, although in many instances neutral medium does well. If your soil tests slightly alkaline apply  $\frac{1}{2}$  to 1 lb. of agricultural sulphur per 100 square feet of area. Avoid the use of lime unless the soil is extremely acid.

Drainage in raised benches as well as in ground beds should be constantly watched. Good drainage with proper aeration are necessary to produce a good crop.

### **FERTILIZERS**

When using fresh soil, apply 3 to 5 lbs. of super phosphate per 100 square feet of area plus a liberal application of manure before planting. A mulch of peat or rooted manure applied two to three weeks after planting is helpful. Six weeks after planting and every three weeks until color shows an application of ammonium sulfate at the rate of 1 lb. per 100 square feet of area or 2 lbs. of a complete fertilizer are advisable. Remember that the plant is the best guide as to fertilizer requirements.

When using sterilized soil the best recommendations to follow would be to analyze your soil from time to time. We have found that when the following nutrient levels are kept, good crops are the result. Nitrate nitrogen should be between 10 to 25 parts per million; phosphorus from 2 to 5 parts per million and potassium 20 to 40 parts per million.

### **WATERING**

The knowledge of proper watering is essential to success. Chrysanthemums produce extremely heavy foliage and a great deal of water is required at the roots, and under ordinary conditions of bench culture overwatering would be difficult. When grown in beds more care should be exercised in watering.

### **PESTS**

The most troublesome diseases on the chrysanthemum are, Verticillium wilt, stem rot, mildew and Septoria leaf spot. Planting healthy cuttings and by using fresh soil should reduce Verticillium wilt and stem rot to a minimum. Dusting with sulphur will control mildew. Proper ventilation, especially in early fall, and spraying with Bordeaux mixture at least once a week for three weeks will reduce this pest.

Weekly spraying with good dependable insecticides will control the insects such as aphids, tarnish plant bugs, leaf rollers, mealy bugs, red spiders, midge and thrips.

Thoroughness in spraying is very necessary for the control of these pests.

We will at all times endeavor to serve you to the very best of our ability. If you have any questions, cultural problems, etc., from time to time, please feel free to call upon us. If we are able to help you we shall be more than repaid.

## To Delay Flowering by the Use of Artificial Light

For this purpose select the better mid season and late varieties and grow normally. Disbuds and standards are more profitable than pompons, additional light reduces the number of buds produced on each spray reducing production. Planting date may be several weeks later than when no lights are used. Pinch all varieties late to avoid tendency for crown buds.

Light with 40 watt lamps using tin reflectors hung at intervals of four feet over the bench. Three to ten foot candles are effective and economical.

Your local lighting expert will explain these terms if you are not familiar with them.

Start lights no later than August 10th. It is very important that lights are started before bud differentiation. Starting after this date may cause malformed flowers and long necks.

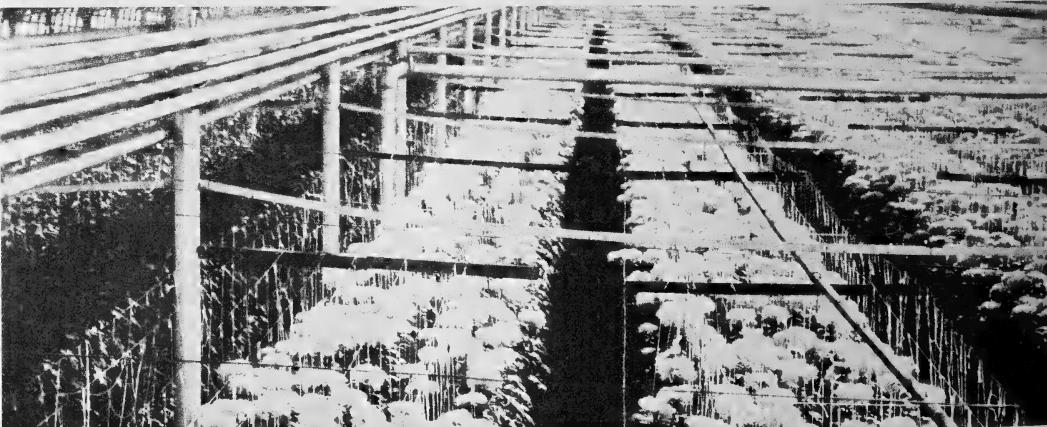

Turn lights on at dusk and continue lighting three hours every evening or light for 60 minutes each night at midnight. Treat each night until you have treated  $\frac{3}{4}$  as many nights as you wish to delay flowering. In other words, for twenty days if you wish a thirty day delay in flowering.

Take the first bud showing after light treatment is stopped.

Pinch pompons the last time 30 days before light treatment is discontinued.

Grow at night temperature of not less than 50 degrees where possible and consistent with local weather conditions. Cooler temperature will induce blindness.

Be careful that the lights from the bench treated does not light a bench nearby that is not treated. This will cause part of the bench not under treatment to be delayed in flowering and consequently upset growing plans for bench not under treatment.

Our interest in you and your crops by no means ends with the sale. We are more than anxious to have the materials sold you grow and prove profitable. For this reason we have inaugurated suggestion service. If we are able to help you we shall be more than repaid.
